4. For Land Close to Dzongkhag Throms as Listed Below (Class A1)

SN.	Class A1 Rural Land	Kamzhing Rate (Nu./decimal)	Chhuzhing Rate (Nu./decimal)
1	Rural Land \leq 2 KM from Thimphu Thromde boundary	287,496.00	100,623.60
2	Rural Land \leq 1 KM from Gelephu Thromde boundary	41,164.20	14,407.47
3	Rural Land \leq 1 KM from Paro Thromde boundary	58,000.00	20,300.00
4	Rural Land \leq 1 KM from Punakha Throm boundary	55,756.80	19,514.88
5	Rural Land \leq 1 KM from Wangdue Phodrang Throm boundary	49,426.66	17,299.33

Distance from the respective Thromde is to be taken as the horizontal distance from the nearest Thromde boundary as demarcated by the MIT.

5. Factors when determining Compensation Rates for Rural

The following factors shall be taken into account when calculating the rural land compensation rate for all Classes of Land:

1. Distance from the High way / Feeder Road;
2. Water availability on land;
3. Topography of land;
4. Soil In-stability
5. Scenic, cultural and historical value

1. Distance from the Highway / Feeder road:

- The compensation rate shall increase by 15% if the location of the land under assessment is directly connected to highway / feeder road.
- The compensation rate shall increase by 10% if the location of the land under assessment is within half an hour (normal route) by normal walking distance from the nearest highway / feeder road.
- The compensation rate shall increase by 5% if the location of the land under assessment is more than half an hour (normal route) but less than or equal to one-hour normal walking distance from the nearest high way / feeder road.
- If the land under assessment is more than 1-hour normal walking distance, there shall be no percentage increase in Compensation rate.

2. Water availability on the land: (water source within 1 km distance at the time of assessment)

- The compensation rate shall reduce by 5% if there is no water at the land under assessment at the time of assessment.

3. Topography of the land:

- The compensation rate shall remain same if the topography is less than 45°.
- The compensation rate shall decrease by 10% if the topography of the land under assessment is more than or equal to 45°.

4. Soil In-stability:

- 10% decrease if land under valuation is unstable, marshy and prone to landslides while rate will remain same should the soil be stable.

5. Scenic, cultural and historical value:

- 5% increase should the land under valuation have scenic cultural and historical significance.

1. Factors consideration for urban

The following factors shall be taken into account when calculating the throm land compensation rates:

1. No Road Connection – The compensation rates shall decrease by 5% if road connection is not available.
2. Soil In-stability – The compensation rates shall decrease by 10% if the soil is un-stable and prone to landslides etc.
3. No Access to Water – The compensation rates shall decrease by 5% if there is no access to water.
4. No Access to sewerage facilities – The compensation rates shall decrease by 5% if there is no access to sewer line.

E. Guideline on Compensation Rate for Buildings/Structures on the Land

The compensation for building/structures shall be based on its current construction cost, which is the cost of constructing a similar structure at the current prices. This should amount to the replacement cost with no depreciations being applied, as done earlier.

F. Implementation Procedure

The implementation procedural steps will be as follows:

1. **Initiation:** On the decision of the agency/project to acquire land, the proposal is to be submitted to the National Land Commission Secretariat (NLCS) for formal approval. The NLCS will convey its decision within 2 weeks. (Ref: Section 155 of the Land Rules & Regulations of the Kingdom of Bhutan 2007).
2. **Notification:** Subject to the approval of the NLCS, the Dzongkhag or Thomdey Committee is to notify the landowner of the Government's intention to acquire land at least 120 days prior to the acquisition of the land. (Ref: Section 156 and 157 of the Land Rules & Regulations of the Kingdom of Bhutan 2007).
3. **Replacement:** Should the landowner opt for a substitute land, the case shall be dealt with as per the Land Act of Bhutan 2007. Should the landowner opt for monetary compensation, the Dzongkhag / Thomdey Committee will determine the compensation amount as per the compensation rates fixed by the Government.
4. **Referencing of Municipal Boundary:** For distances from the municipal boundary, the boundary demarcated by the MWHS shall be taken.
5. **Valuation:** The compensation for land shall also be worked out by the Committee based on the rates while the compensation for the structures shall be based on the estimates prepared by qualified engineers (Dzongkhag Engineers) vetted by the Committee.
6. **Taking Possession:** Taking possession of the land shall be as stipulated in Section 158 of the Land Act of Bhutan 2007.
7. **Effective Rate:** The compensation rate applicable shall be as per the category of land as on the date of notification of the Government's intention to acquire land.

H. Compensation Rate for Developed pasture

Compensation rate of Developed pasture = **Nu. 30,680.00 per acre**

I. Land Development Cost of Chhuzhing

Land Development Cost of Chhuzhing for people losing their Chhuzhing and opting to develop substitute land into a Chhuzhing again = **Nu. 2,392.60 per decimal**

J. Formula for working out compensation of Forest Trees

1. **Trees Bigger than 1 foot girth $FC = (Vtree * Rpr)$**

Where, FC = Forest Compensation; Vtree = Total volume of tree in cft.

Rpr = Prevailing price of timber logs as regulated by Natural Resource Pricing

Committee in that or nearby locality in cft. The rate of timber should be according to class of timber as approved by the DoF from time to time.

Method of Volume Calculation

The volume of tree should be calculated using the following formula:

$Vtree = g^2/4\pi * \text{height of tree}$ (only merchantable height should be measured in feet)

Where, Vtree = Volume of tree in cft. and

g = girth of tree in feet or inches (girth should be measured by measuring tape)

2. **Trees smaller than 1 foot girth $FC = (Cseedling + Pplanting & est + Mmain)$**

Where, FC = Forest Compensation; and Cseedling = Cost of seedling (this should be according to class of timber and calculated at present rates)

Pplanting & est = Cost of planting (including establishment cost) based on present rates.

Mmain = Cost of maintenance (year 2,3,4,5,6,...and above).

K. Valuation Format for Rural land

		Agency -				Valuation Reference No.	
1	Name of owner	:					
2	ID Number	:					
3	Location of land	:					
4	Plot No. / Thram No.	:					
5	Geog						
6	Dzongkhag						
7	Type of Land	Kamzhing	Chhuzhing	Orchard			
8	Total Area (A + B)						
	Area (A) Topg < 45°						
	Area (B) Topg ≥ 45°						
	Class of land	Class A1	Class A	Class B	Class C	Class D	Amount (Nu)
	Distance from MB	≤ 1 Km	≤ 3 Kms	3 < L ≤ 6	C> 6-9 Kms	C> 9 Kms	
A	Base Rate (Nu. per decimal) Tick the appropriate class						
						% Addition	
B1	Distance from highway / feeder road	Land within half an hour walking distance			15%		
		Land within half an hour walking distance			10%		
		Half hour < Land ≤ 1 hour walking distance			5%		
		More than an hour walking distance			0%		
B2	Water availability	Water availability within 1 km distance from source			0		
		No Water availability on land			-5%		
B3	Soil In-stability	Stable land			0		
		Unstable land			-10%		
B4	Scenic, cultural and historical value	Exist			5%		
		Regular			0		
	Adjusted Rate (AR) = A + (B1 + B2 + B3 + B4)						
	Topography (Topg)*	Area (A)			1.00		
		Area (B)			-10.00%		
	Therefore final value of land						
* Land topography below 45 ° will be at par with the adjusted rate (AR). However, if a parcel or a portion of the land is equal to or more than 45°, the land compensation rate will reduce by 10% on pro rata basis.
