## II. External Debt

For monitoring and reporting, external debt is classified based on the contracting party, by purpose, the currency of borrowing, and the creditor. The contracting party could be the government, corporation, or central bank. A hydro loan or a non-hydro loan are two categories of the purpose of the loan. And an external loan is contracted either in Rupees (INR) or convertible currency (CC), depending on the creditor.

## II.1 External debt by Contracting Agency: Government Debt, Corporate Debt, and Central Bank Debt

Others include borrowing for financing infrastructure development, such as rural electrification, agriculture, road connectivity, trade infrastructure, and urban development. It also includes borrowing for education and health sectors under the social category.

Table 5: External Debt Servicing

\* *The off-budget debt services are those external debts (on-lent and outright SOE liabilities) servicing that are made directly by SoEs and RMA, without routing through the Government budget system;*

\*\* *The nominal GDP for FY 2021-22, FY 2022-23 & FY 2023-24, export and domestic revenue for FY 2023-24 are estimates based on the third quarter of FY 2022-23 (March 2023) MFCTC update, which could change with the next quarter update.*

The debt service as a percentage of government revenue is estimated at 32.4 percent for FY 2023-24 which is within the threshold prescribed in the Public Debt Management Policy of 2023 (*total debt service to domestic revenue is 35%*).

The external debt service to exports ratio measures how much of the country's export earnings will be used in servicing the external debt, exposing vulnerabilities to export

shortfall, if any, during the year. The external debt service to exports ratio is estimated at 16.8 percent in FY 2023-24.

### III. Domestic Debt

The total domestic debt stock on 30 September 2023 stood at Nu. 26,100.552 million, accounting for 12.9% of the estimated GDP and 9.6% of total public debt stock. Table 6 is the detail of domestic debt stock.

Table 6: Domestic debt summary

The domestic debt mainly comprised of T-Bill stock of Nu.7,300.000 million and Government bonds of Nu.18,800.552 million. Series of Government bonds were issued: a 10-year Government bond of Nu.700 million in February 2021; a 10-year Government bond of Nu.3,000 million in February 2022; a 7-year Government bond of Nu.1,500 million in April 2022; a 12-year Government bond of Nu.4,000 million in June 2022, a 10-year Government bond of Nu. 1,250 million each in January and February 2023 respectively; a 9-year Government bond of Nu. 3,101.12 million in May 2023, and a 5-year Government bond of Nu. 1,002.50 million in June 2023.

In keeping with the secondary objective of public debt management - to develop the capital market by the government, the MoF has completed partial roll-over, up to Nu. 2,996.932 million, of the bond series RGoB001 in September 2023 under the same terms and conditions.

The domestic debt decreased by Nu. 6,690.069 million (-20.4%) compared to the domestic debt at the end of the previous quarter owing to improvement in domestic revenue inflows and the settlement of WMA & overdraft facility outstanding during the period.

#### IV. Non-Hydro Budgetary Debt

The non-hydro budgetary debt refers to the central government debt where all the liabilities fall directly to the government. Government availed such debt for meeting the financing of budget deficit both through external and domestic financing.

Category	Amount (M Nu.)
<b>(a) External Budgetary Debt</b>	<b>65,199.798</b>
Percent of GDP	32.2%
<b>(b) Domestic Budgetary Debt*</b>	<b>25,400.552</b>

Percent of GDP	44.8%
Percent of Total Public Debt	33.2%

Table 7: Total Non-Hydro Budgetary debt summary as of 30 September 2023

As on 30 September 2023, the non-hydro budgetary debt stood at Nu. 90,600.350 million, constituting 33.2% of total public debt and 44.8% of estimated GDP. *The Public Debt Management Policy 2023 requires the Non-Hydro Budgetary debt stock to be within 55% of GDP annually and is, therefore, within the threshold.*

#### V. Redemption profile

As of 30 September 2023, the principal repayment of the public debt stock is as charted below in chart 5.

Figure 5: Principal repayment profile

Note: This repayment profile is on the current loan outstanding and excludes future disbursements.

The high repayment of Ngultrum-denominated debt in FY 2023/24 is due to the redemption of Nu.7,300.000 million against the T-Bills outstanding.

The significant spike in external repayment in FY 2027/28 is for the settlement of the Standby Credit Facility with GoI. The repayment dateline is extended for the credit facility to FY2027/28 at a revised rate of 2.5% per annum from 1<sup>st</sup> July 2022. With the commencement of repayments for all the mega hydropower projects, the external repayment will likely remain elevated until FY2037/38. However, with the liquidation of MHP loans in FY 2038/39, the repayment is projected to drop significantly and stabilize thereafter.

## VI. Government Guarantee

Table 7 presents the details of the guarantees issued by the Government as of 30 September 2023.

<b>Debt Stress</b>	Hydro Debt to GDP (%)			82.5%
	Non-Hydro Debt to GDP (%)			39.4%

Table 9: Cost and Risk Indicators for existing debt as of 30 September 2023.

Despite elevated levels of total public debt at 134.8% and external debt at 122.0% of GDP, the overall risk is deemed manageable, and external debt distress is considered moderate for the following reasons;

- i. A significant portion of external debt is on account of hydropower projects and deemed commercially viable, with a secured export market in India. In addition, 90.8% of the hydro debt is INR denominated, which does not pose any exchange rate risks due to currency pegged.
- ii. The fixed interest rate debt constituted 95.3% of the total public debt. In addition, the average time to re-fixing (ATR) is around 11.1 years. Thus, the interest rate risk is deemed low due to the long ATR and the low portion of the variable-interest-rate debt.
- iii. The Average Time to Maturity (ATM) is around 11.6 years, and about 4.4% of the debt (1.9% of external debt and 28.0% of the domestic debt) will be maturing in 1 year. The

long ATM and the low level of debt maturing in 1 year indicate the low refinancing/rollover risk.

- iv. Since 28.0% of domestic debt (mostly T-Bills) would be maturing within one year, the refinancing risk is on the higher side owing to the current liquidity constraints with the financial institutions – the primary investors of short-term instruments.
- v. Hydropower debt constitutes 67.7% of total external debt. Hydropower debt is considered low risk as debt servicing for hydropower loans from India starts only a year after the commissioning of the projects, ensuring revenue inflow before debt servicing starts. Further, the export tariff for electricity is calculated based on the projects' overall cost, including the projected debt servicing cost, ensuring that the revenue from the sale of electricity would provide adequate cushion for debt servicing.
- vi. Similarly, all hydropower projects are insured and reinsured against natural risks. So, the only remaining uninsured risk is hydrological (that is, if there is no enough water to produce electricity).

The balance 32.3% of the external debt is CC-denominated debt, which is concessional loans with nominal interest rates (from 0% to 1.5%), long grace periods (8 to 10 years), and repayment periods of up to 40 years. The concessional nature of the CC-denominated debt has ensured that the impact of debt servicing on the government's cash flow and the forex reserve is spread over a long period, thus mitigating the liquidity risks.
